

Amyl Acetate

INCI Name: Amyl Acetate

CAS Numbers: 628-23-7

Description:

Amyl Acetate is an organic compound used as a flavoring agent, solvent, and in the preparation of penicillin. It has a pleasant fruity odor and is used in the manufacture of artificial fruit essences. It is also called "banana oil".

Technical Data:

Analysis	Units	Specification
Amyl acetates	% wt.	≥98.0
Water	% wt.	≤0.2
Acidity	% wt.	≤0.010
Appearance		
Color, Pt-Co		≤15
Odor, color and appearance		odor match std., colorless transparent liquid
Refractive index		1403 at 72F
Flash point		100F Flammable
Specific Gravity		0.873 at 72F
Density		7.278 lbs/gal at 72F
Solubility		insoluble in water, soluble in alcohol and oils

Applications:

Amyl Acetate is used to impart a banana like flavor and smell to food substances. It is also used in nail polishes, leather polishes, and as a solvent for lacquers and paints.
